- An innovative catheterization and surgical hybrid suite
- A high-tech electrophysiology suite
  - 6 diagnostic suites
  - 8 private patient rooms
- Latest medical technologies and treatments
- Minimally invasive surgical options
- Expert cardiac care team
Welcome to the heart of patient care.

We strive for excellence in everything we do for heart patients, and it shows. In 2021, Healthgrades, the leading online resource for information about physicians and hospitals, again named us one of America’s 100 Best Hospitals for Cardiac Care and Coronary Intervention.

As part of our constant effort to speed and strengthen care for heart patients, we have opened a new state-of-the-art heart and vascular center.

From research and diagnosis to treatment and recovery, the center’s comprehensive range of cardiovascular services — along with the latest medical technologies — are all brought together under one roof.

Located directly above our Nan and Howard Schow Emergency & Trauma Center, the new Helen and Will Webster Heart & Vascular Center reduces time to treatment for cardiac patients and allows us to increase the number of patients we treat by 30 percent, further healing hearts and saving lives.

If you need expert cardiac care, follow your heart to Huntington Hospital — we look forward to welcoming you.
